Biskus APFS Capture

Biskus APFS Capture is the first tool on the market to retrieve file information from APFS (Apple File System) formatted disks, enabling forensics analysis of such disks.

Current features

- Provide an interactive directory browser to find and copy files on all available APFS volumes.
- Quickly dump all relevant catalog (directory) information into a database for easy browsing.
- Copy all directories and files to a local file system for later analysis with other tools.
- Available for Windows and macOS (Linux support can be made available on request, too).

Current limitations

- Encrypted volumes are not readable, yet. A solution is in the works.

Planned features

- Decryption, provided the key or password is known.
- Locating remains of deleted metadata, such as file names of deleted items from unused parts of B*Tree nodes.
- Whatever else the market needs and that is not provided by other tools, yet.

Licensing & Pricing

- Limited Trial version is available from http://biskus.com
- To unlock unrestricted use, the program needs to be linked to a single computer.
- Intro price: US$195 (180€) per seat, with free updates for one year. Volume licenses available on request.
- Personal assistance: 160€/h
